

Dear Mr Benbadis,

I was looking for a challenging and fascinating internship where I can use my acquired skills practically. Because of my personal interest and experience in telecommunication technology and networking I believe that the position at Thales advanced studies TAI Lab is an excellent opportunity for me and that I can contribute a lot and thus I am applying at your institution.

During my Bachelor studies and my student job in the field of LTE research I became fascinated by networking technology and I developed a keen interest in it. In the course of my Master studies in the field of Internet Technology I gained deep knowledge about the concepts of Software Defined Networking and got intrigued by this novel approach which will lead to groundbreaking changes in the future of telecommunication. Besides my studies I am also interested in traveling which was the reason for me to join an international student association where I was a board member and organized international gatherings. Furthermore I decided to pursue an international Master program combining technology and innovation and I believe that this has enabled me to be open to new ideas and understand people from different cultures in a better way which is a useful skill in an international environment like at Thales.

As an innovation-minded person and problem solver I believe that my skills and experience greatly match the offered position at Thales. I am looking forward to your response and it would be a great pleasure for me to meet you in person. Thank you for your time and consideration.

Sincerely yours,

**Maximilian Bachl**
